Standard Interpretation for S-N Values

Less than 0.301      Open  
0.301 – 1.000      Preg-Recheck  
More than 1.000      Pregnant

Individual animal results vary  
Values do **not** measure days of  
pregnancy

ELISA pregnancy analysis is best between 28-45 days carried calf (DCC) and 65 DCC thru dry-off. PAG levels for *all* cows drop between 45-65 DCC, so all cows diagnosed as open or preg-recheck during 45-65 DCC should be rechecked.

**Please remember to record all “pregnant”, “open”, and “recheck” results in your DHIA records!**
